

## Yash M. Patel

Age : 21 Years

Sex : Male

PID : 555

## Sample Collected At:

125, Shivam Bungalow, S G Road,  
Mumbai

Ref. By: Dr. Hiren Shah

Registered on: 02:31 PM 02 Dec, 2X

Collected on: 03:11 PM 02 Dec, 2X

Reported on: 04:35 PM 02 Dec, 2X

## C-REACTIVE PROTEIN (CRP)

| Investigation         | Result | Reference Value | Unit  |
|-----------------------|--------|-----------------|-------|
| Primary Sample Type : | Serum  |                 |       |
| C-REACTIVE PROTEIN    | 89.5   | High 0.0 - 5    | mg/dL |

### Interpretation:

- Measurement of CRP is useful for the detection and evaluation of infection, tissue injury, inflammatory disorders, and associated diseases.
- High sensitivity CRP (hsCRP) measurements may be used as an independent risk marker for the identification of individuals at risk for future cardiovascular disease.
- Increase in CRP values are non-Specific and should not be interpreted without a complete history.

The level of CRP in the blood is normally low.

### Increased CRP level:

A high or increasing amount of CRP in the blood suggests the presence of inflammation but will not identify its location or the cause.

- Suspected bacterial infection – a high CRP level can provide confirmation that you have a serious bacterial infection.
- Chronic inflammatory disease – high levels of CRP suggest a flare-up if you have a chronic inflammatory disease or that treatment has not been effective. \*
